

The Complete Blockchain Infrastructure Platform for  
**Enterprise Solutions**

---

# About us

---

ProximaX was founded in March 2018 with a funding of US\$35m. It is the brainchild of Lon Wong, an internationally recognized figure and advocate of blockchain technology. It is a technology company that helps enterprises implement blockchain technology across their business process.

ProximaX Sirius is our exclusive platform that combines the potential of proven distributed ledger technologies for enterprise-grade applications and solutions. With this, we expand our technology's use cases beyond traditional blockchains. Our solutions enable both governments as well as public and private sector enterprises to leverage the potential of blockchain technology in public, private, hybrid, or consortia environments.

The blockchain layer of our platform acts as the core while the other layers power a wide range of functionalities and services needed across most industries today. From messaging and storage to streaming and Supercontracts, enterprises can use ProximaX Sirius to build applications and solutions easily, quickly, and at a lower total cost of ownership. Furthermore, the superior architecture of our platform makes it highly scalable where we can add more layers without any compromise on performance.

We aim to be the enabler of high-throughput decentralized solutions that optimize business processes to improve efficiency, save time, and increase profitability.

# Solutions

---

## 1. Health, Identity, IoT, and Recording Systems

Leverage the potential of distributed storage and ensure the highest levels of data security.

## 2. KYC Processes and Identity Management

Use blockchain identities to verify customers and mitigate the risks of fake identities.

## 3. Notary Services

Guarantee the authenticity of data and ensure the legitimacy of notarization processes.

## 4. Asset Tokenization System

Tokenize anything from real estate and commodity to copyright and brand equity.

## 5. Traceability and Supply Chain Management

Make supply chain management processes more transparent and easily trace everything back to its origin.

## 6. Stream Content Delivery and Messaging

Add cryptographic security to content delivery and messaging services.

## 7. E-Commerce and Customer Relationship Management

Build a more reliable and accurate CRM system to win the trust of more customers on the internet.

## 8. Business Process Management

Add transparency to your business process management both inside and outside the company.

## 9. Trade Finance and Accounting

Digitalize trade finance processes to make them time and cost-effective, and also more productive.

## 10. Registries

Combat manual errors and redundant documentation processes through automation using blockchain.

## 11. Big Data and Machine Learning

Power big data and machine learning processes with the security of blockchain storage.

# Benefits of Building on ProximaX Sirius

---

Applications and solutions developed on ProximaX have prominent inherent characteristics.

## Secure

They leverage decentralized infrastructure and are secure against hacks and thefts.

## Scalable

Applications can be scaled to multiple chains and systems without losing speed and throughput.

## Flexible

It is easy to implement advanced features including Supercontracts and cross-chain functionality.

## Extensible

New services can be integrated into solutions without compromising the overall performance.

## Reliable

Applications are safe against network outages or data loss as the platform uses multiple servers and records.

## Our Leader

---

**Lon Wong - Founder & CEO**

Lon Wong is an internationally recognized thought leader and veteran in the blockchain space. He has 35 years of experience as an entrepreneur and technologist and was previously the founding president of one of the largest blockchain projects in the world. Now, he intends to drive the mass adoption of blockchain technology by making it easy to implement and integrate across enterprise processes.
